INDEX - PART I

Canadian Exports to Greege	

1. Geography

The total area of Greece is 50,942 square miles of which the mainland covers 40,961 sq. miles and the islands 9,981 sq. miles.

Greece is situated in the sourthern part of Europe, at a point between the advanced countries of the West and the newly developing countries of Africa and the Middle East. Topographically Greece consists of mountainous mainland with a long coastline and numerous islands of all sizes. Geographical conditions which limit the area of arable land and hamper internal communications, complicate the task of economic development.

CHIEF TOWNS

~	POPULATION	(1961 Census)		
Athens (capital) .	627,564	Larissa		55,391
Thessaloniki (Salonika)	250,920	Volo		49,221

Source: Europa Yearbook

Piraeus, Salonika, (Volos) are the major ports of Greece.

The principal port of Greece is Piraeus, through which 70 per cent of Greek imports, 40 per cent of Greek exports and 90 per cent of Greek passenger traffic flows.

The main industrial potential of the country is concentrated in the Athens-Piraeus area and the neighbouring area of Eleusis. Another important industrial area is that of Ptolemais, in Northern Greece,

Digitized by the Internet Archive in 2024 with funding from University of Toronto

which has been called the "Greek Ruhr". With the establishment of a second oil refinery, a fertilizer plant and a series of petrochemical industries, Thessaloniki, the capital of Northern Greece, has become an important industrial area.

At Patras in the Peloponnese, several important industries are in operation, including textile mills, wine and spirits distilleries and a rubber tire factory. Kavala is also attracting new industries.

Athens and Kavalla constitute the leading marketing and manufacturing centers. They are situtated near the more productive agricultural centers that supply raw materials, such as tobacco, grapes and olives: their coastal locations give them ready access to the raw materials, fuels and markets of the world.

2. Population

The population of Greece, according to the census 1961, numbered 8,388,555. The density is 64.2 per square kilometer. The emigration of Greeks is very high. During the five year period, 1961-1965, 552,600 Greeks left their country for periods exceeding one year to seek employment abroad.

The tendency to emigrate from Greece is attributable to two factors. The first is the inability of the Greek economy to absorb the labour force which came mainly from the agricultural sector. Another factor is the "incentive", which has its source in the wage levels applying in Greece, as compared with those offered in Western Europe.

In 1967, the outflow of emigrants was slower. This was occasioned to a large extent by the decline in the economic activity of West Germany which absorbed the majority of Greek emigrants.

Besides emigration, there has been a drift of the population from rural areas to urban centers, largely due to higher incomes and therefore a higher standard of living.

Economically active population in Greece according to professional group (1961) in thousands, was as follows:

	Total	As percentage of total
Technicians, liberal professions, managerial and executive Clerks and Salesmen Farmers, cattle-breeders, etc. Craftsmen, miners and industrial workers etc. Transport and communication workers Service employees and regulars in the armed forces Undefined	155.7 362.4 1,950.0 702.8 105.9 244.6 141.8	4.2 9.9 53.2 19.2 2.9 6.7 3.9
Total	3,663.1	100.0%

Source: Economy of Greece, 1967

3. Climate

Greece has a Mediterranean climate with hot and dry summers and mild and wet winters.

The annual average rainfall in the northern sections ranges from 20 to 48 inches and in the sourthern parts of the country 15 to 32 inches.

4. Constitution and Government

Greece is a constitutional monarchy. The King is head of the State.

From 1964, the King is Constantine. Legislative power is exercised by the King and the Chamber of Deputies, a unicameral body, elected for a four-year term by adult, universal suffrage. Executive power is exercised by the King through his ministers.

After a coup d'etat in April 1967, the Greek armed forces assumed control of the Government and suspended certain articles of the Consititution.

The country is divided into 52 prefectures, subdivided in 147 counties.

The prefects are not elected but are chosen by a special board for a given term of office.

5. Economy-General

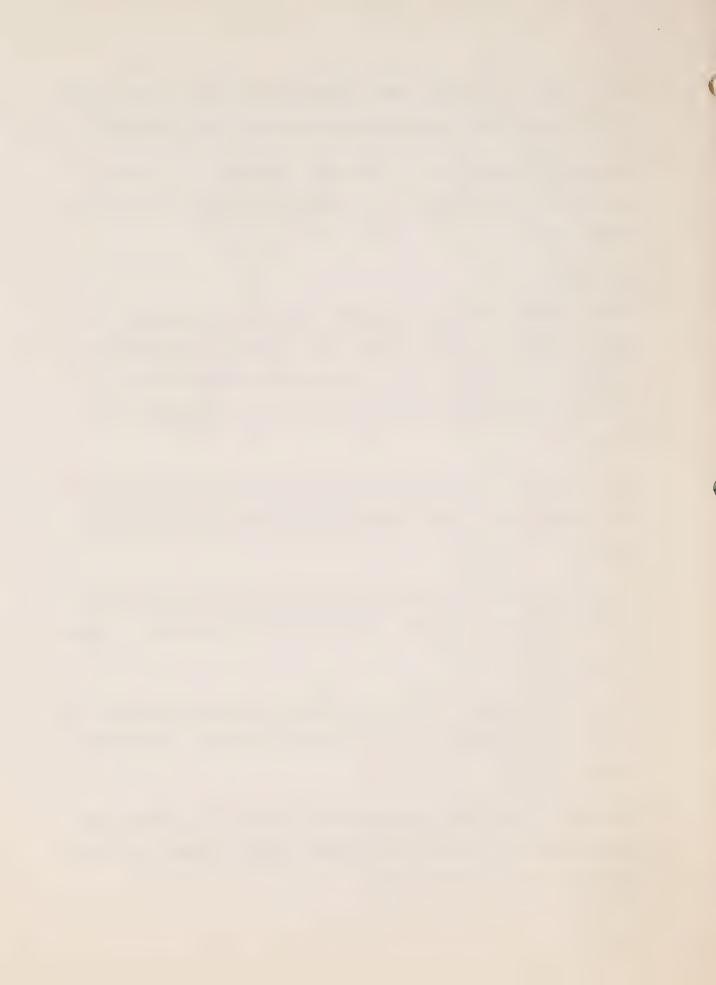

The Greek economy was particularly hard hit by the two world wars, the first prolonged by external conflicts, and the second by a guerilla war lasting until 1950. After the War, Greece made systematic efforts to organize her economy and to adapt the country to the new economic conditions.

Damage inflicted by war and occupation was estimated at U.S. \$1.4 billion which was equivalent to approximately two years of its pre-war national income.

The character of the Greek economy is predominantly agricultural. More than one half of the economically active part of the population is engaged in agriculture.

In spite of political crises that have shattered the country over the past years, the Greek economy is showing a capacity for survival and healthy economic progress.

The economic policy of the new Government is based on the principles of private enterprise, a liberal policy toward foreign investment and Greece's relationship with the Common Market.

5a. Transportation

During the Second World War, the Greek railways were virtually destroyed. Today Greece has approximately 1,550 miles of railways. The locomotives are mainly obsolete; 50% of the locomotives and rolling stock is over 35 years old.

Fassenge-Kilometres and net ton-kilometres of Greek Railways, 1963-1965, were as follows (millions):

			1963	1964	1965
(1)	Passenger-kilometres Net ton-kilometres	•	1,006.7	1,077.9 546.2	1,131.2 570.3

Greek highways, by types of construction (1962) are

4,350 miles asphalt surfaced

1,960 miles macadanized

10,000 miles sand-gravel surfaced

11,130 miles dirt roads

27,440 miles total

About 70% of roads are provinical. The remainder are national highways and municipal and communal roads.

In 1964-1965, the number of vehicles in Greece was as follows:

		1964	1965
Cars .		81,617	104,257
Buses .		8,176	8,485
Trucks		57,657	64,930

The internal and external earnings of the merchant navy represented nearly 4% of the G.N.P.

Vessels entered into Greek ports, and goods loaded and unloaded, 1961-1965, were as follows:

,	1961	1962	1963	1964	1965
Vessels entered ('ooo net reg. tons)	37.137	41,111	42,998	48,302	58,167
Goods Loaded ('ooo metric tons)	2,159	2,189	2,277	2,316	2,727
Goods Unloaded ('ooo metric tons)	5,847	6,526	7,476	8,433	8,885

Note (1): Source: Europa Yearbook

(1)

In 1966, Greek merchant shipping amounted to nearly 7,665 thousand tons, with 1,665 vessels. The tonnage of vessels belonging to Greek owners and flying a foreign flag amounted to over 8 million tons. The Greek merchant fleet ranked seventh in the world.

It should be noted that the earnings in Greece of the merchant navy are low by comparison with those of most other maritime countries, mainly because the head offices of many Greek-owned shipping companies have remained outside Greece.

The earnings per ton of shipping are only about \$20 a year in Greece compared with \$50-80 for Great Britain, Norway and Italy.

The Greek Merchant Fleet as at June 1966, was as follows:

	Number	Gross Reg. Tons
Cargo Beats Passenger Poats Tankers Others	1,145 112 196 202	5,052,201 470,399 1,986,297 96,764

Source: Europa Yearbook.

6. Agriculture

In spite of the mountainous terrain of the Greek mainland and the sparsely vegetated rockiness of the islands, Greece's economy is predominantly agricultural. This predominance is the basic weakness of the Greek economy. In 1965, 25.6% of G.N.P. was originated in agriculture.

Farming constitutes the country's major occupation and almost three-fifths of the population is rural. Also, many of those engaged in manufacturing depend on farms for their raw materials: and others who engage in commercial activities are concerned to a considerable degree with the exchange of agricultural products.

Land under cultivation represents roughly one quarter of the total area of the country, and there seems to be very limited possibilities of extending the cultivated area because mountains and forests cover more than 80% of the country. Another unfavourable feature is the dryness of the ground.

The difficulties in agricultural development arising mainly from natural conditions, are aggravated by the predominance of very small farms.

Nearly 90% of farms, accounting for 50% of cultivated land, occupy an area of less than 5 hectares, and on average, each farm is split into more than 6 separate lots.

Crop-growing accounts for over 70% of total agricultural production, livestock products about 25%, forest products and fishing the remaining 5%. In livestock products, domestic production is insufficient. Output of fishery and forest products is also short of domestic requirements.

Until 1957, agricultural output expanded significantly. As the cultivated area had scarcely increased and employment had remained at the same level, the growth of output was mainly due to a substantial increase in yields as a result of the more rational use of resources and the increasingly wide-spread use of fertilizers and machinery.

Agricultural production in Greece consists, in general of tilled field crops, such as wheat, tobacco and cotton. The most important crops are cereals; vine-growing in some regions is the only crop cultivated. Cultivation of olive tree is traditional in Greece. Production of citrus fruits and other fruits has expanded, and from an income stand point, they have tended to replace other cultivations, especially wines.

The principal crops in Greece (production in *000 metric tons) 1965-1966, was as follows:

	1965	1966
Crop		
Cereals	2,990	3,211
Corn	279	337
Rice	105	86
Wheat	1.989	1.962
Barley	412	632
Other	205	194
Fruits and Vegetables		
Peaches	93	94
Citrus fruit	412	514
Currants	79	88
Figs	22	26
Grapes	149	132
Potatoes	589	608

Vegetables	1,353	1,392
Cotton (unginned)	200	238
Sugar beets	661	705
Olive oil	189	180
Olives (edible)	45	76
Tobacco	121	109

¹ One metric ton equals 2,204.6 pounds. Source: Foreign Agricultural Service, U. S. Department of Agriculture, Washington, D. C.

The quantity of tobacco grown in Greece in 1966 amounted to 92,000 tons. Greek exports of tobacco leaf in 1966 was 73,217 tons valued at \$111.6 millions. The exports of tobacco accounts for about 27% of the total value of exports.

Large tobacco production in the Southern European countries has created a glut of Oriental-type tobacco on the world's market and this has rendered essential limitation of tobacco grown in Greece. Nevertheless, the Greek Government is obliged to intervene in the domestic tobacco market with bulk-purchasing of the tobacco crop in order to prevent a sharp decline in prices.

Direct or indirect subsidies are also accorded to other cultivations such as cotton, fodder and citrus fruits.

The requirements of potatoes are covered in general by domestic production.

Greece imports small quantities of potatoes at the end of crop season or when necessary to restrain prices.

The production of rice, although progressively increasing from year to year, is not yet sufficient to meet domestic requirements.

Olive oil forms the basis of the diet of the Greek people. In 1966 Greece exported olive oil in the amount of \$4.6 million.

The cultivation of citrus fruits is expanding, replacing in some rural areas the cultivation of wine.

Domestic production of livestock is unable to meet domestic requirements so that Greece must import live animals, fresh and frozen meats.

The livestock population and meat production in Greece, 1964-1966, was as follows:

maki a Carron Firmana i makala and M	a4 Thur. i

	1961	1962	1963	1964
Milk . Butter . Cheese . Fresh Cream	959 8 90	1,035 7-1 95	1,054 6.5 96	1,065 6 100

Source: Europa Yearbook

Greece imports fresh beef (from Yugoslavia); frozen beef (from Poland, Argentina, Austria, New Zealand, Uruguary); fresh mutton (from Yugoslavia): frozen mutton and goats meat (Argentina, Australia, Uruguay); frozen poultry (U.S.A., Denmark, Bulgaria).

During 1966 Greece imported:

20,948 head of live cattle 815,393 head of live sheep and goats 42 tons of live poultry

One of the main objectives of Greek agricultural policy is to switch from the production of wheat, which surplus is sometimes difficult to export, to easier marketable products such as cotton, fruits and vegetables.

The Greek Government intervenes regularly to support the incomes of certain categories of agricultural producers, either by fixing floor prices (raisins) or by purchasing specific quantities at fixed prices (tobacco, olive oil).

Frosperity in agriculture is dependent upon rapid expansion in other sectors. Experience shows that the more advanced is the state of the national economy as a whole, the easier it is to modernize agriculture.

Under the agricultural programme, a substantial increase is expected in livestock and its products, and in the production of cotton, fodder, fruit and vegetables.

6a. Fishing

In 1965, the total number of motor vessels for ocean, offshore and inshore fishing was 7,093, powered by a total of 156,493 HP.

According to Greek National Statistical Service, Greek fishing catch 1965, in tons and value was as follows:

	Catch in tons	Value in \$'000's
Total Ocean	83,497 28,853	31,367 10,432
Offshore Inshore	33,964 20,680	10,454

In the Greek islands sponge-fishing is still widespread.

Fish catches are inadequate for domestic requirements.

7. Forestry

The forests of Greece were severely damaged during the last war, mainly due to lack of fuels other than wood. As a result, re-afforestation has been necessary on a large scale.

The total forest area of Greece is estimated at 6 million acres or 18.5 per cent of the total land area. From the forest resources of the country, a number of products are obtained.

Recently wood for fuel and charcoal show a continuous decrease, owing to their substitution by other more economical fuels.

The production of timber in Greece is insufficient to cover the domestic demand, especially of structural timber, and large quantities of lumber are imported annually to supply local demand.

8. Mining

Mining production including quarrying, accounts for only about 1.5 per cent of the national income, and provides employment for barely 25,000 people.

The country is short of high-grade coal, but has rich lignite deposits.

Non-ferrous metals form the main mineral wealth of Greece. Petroleum exploration continues in various areas of Greece without encouraging results.

According to the Greek Ministry of Industry, production of the main minerals in Greece 1962-1964 was:

*000 metric tons.

				1962	1963	196.5
Lignite and I	Brown	Coal		2,694.5	3,525.8	3,873.0
Iron Ore				211.8	35.0

Source: Europa Yearbook

Beside supplying bauxite to the domestic aluminium industry, Greece exports bauxite to several countries.

Greece is one of the largest producers and exporters of sulphur in Europe.

Greece exported the major part of its mining production. Its difficulties in selling mining product abroad are mainly due to the high cost of production. With the exception of bauxite, Greek mines operate far below their productive capacity.

9. Industry

The structure of Greek industry until recently was typical of that of an underdeveloped economy: the most important branches were the food-beverages-tobacco and textile industries. The clear tendency is evident, however, for these industries to slowly decline in relative importance, while the metal, machinery and chemical industries are growing in importance. The mechanical engineering industries, and basic metallurgy, and the chemical industries are growing in importance. The mechanical engineering industries, and basic metallurgy, and the chemical industry have shown the biggest expansion. There are also important oil refineries and shippards.

Output in the manufacturing industry, stimulated by the rapid growth of demand, has risen since 1955 at an annual rate of 6.7%. The marked improvement in productivity is largely attributable to the modernization of industrial trial plants.

Within the scope of industrialization efforts, various key industries have been founded, outstanding among which are an alumina and aluminium industry, oil refineries, sugar mills, a nickel plant, shipbuilding yards, iron, and steel rolling mills, blast furnaces, chemical fertilizer factories, petrochemical products and other plants.

Manufacturing production represents about 20 per cent of the net national product.

Gross Domestic Product of Manufacturing in Greece, 1964-1965, (in millions U.S. Dollars at 1958 prices) was as follows:

AND THE RESIDENCE AND ADDRESS OF THE PARTY O	1964	1 1965
Total	705.8	769.2
Food, beverages, and tobacco	161.4	170.4
Textiles	109.8	119.9
Clothing and footwear	82.4	88.4
Wood and furniture	40.6	38.8
Paper, printing and publishing	32.3	37.8
Chemicals	71.2	80.4

Basic metal industries	21.3	26.9
Metal products, machinery, and electrical		
machinery	91.0	100.5
Transport equipment	24.5	25.4
Other Manufacturing	17.8	18.5
¹ Provisional data. Source: National Statistical Service of Greece, Co Yearbook of Greece, Athens. 1967.	ncise St	atistica

The outstanding features of manufacturing industry are the predominance of small undertakings, and the heavy concentration in the Athens region.

The leading manufacturing activities at present are those associated with the processing of agricultural and pastoral products, and include the manufacture of olive oil, wine, and tobacco products: the drying and packing of currants and sultana raisins; and the manufacture of textiles from locally-produced and imported cotton and wool. Most manufactured products come from small artisan shops. However, some larger factories make such items as textiles, cement and chemicals.

The aim of Greek industrial policy is to speed the country's industrialization. The new Five-Year Plan has as one of its principal targets an annual average increase in industrial production of between 11% and 12%.

Efforts in recent years to industrialize the country on a large scale have resulted in stepping up secondary production.

(a) Textile industry

Textiles continue to be one of the country's basic industries. It has a limited number of up-to-date plants in addition to smaller mills which make up the bulk of the industry. 92.4% of textile industries operate on a handicraft basis, while a percentage of 7.6% operate on an industrial scale.

The textile industry represented (1966) 15.3% of total wages and salaries paid out in industry as a whole, and 11.7% of total employment.

The most important part of the Greek textile industry is the cotton industry. It utilizes substantial quantities of the domestic cotton crop each year and employs a large number of workers.

After the Second World War, Greece has modernized its cotton industry. This industry has assumed a position of prime importance in the export of manufactured goods.

Greece exported in 1966, 45,207 tons of raw cotton, representing a total value of \$27.2 million. On the other hand in 1966, 6,214 tons of cotton seed and 9,248 tons of raw cotton were imported to Greece (total value \$6.2 million).

(b) Metal Products Industry

This branch consists of the metal products industry (6.5% of the total wages and salaries and 8.2% of the total employment); machinery industry (3.1% of the total wages and salaries and 3% of the total employment): electrical appliances and apparatus industry (4.1% of the total wages and salaries and 3% of the total employment); transportation equipment industry (6.4% of the total wages and salaries and 5.3% of total employment).

The electrical appliances industry is represented by some modern factories, the production of which meets a substantial proportion of the constantly growing demand for domestic electrical appliances.

(c) The foodstuffs industry

The foodstuffs industry has developed notably in recent years. It includes breweries as wine and spirit plants. The expansion of the fruit juice and fruit and vegetable canning industries is keeping pace with the growth of the production of fruits.

The Greek sugar industry is well developed. In 1967 production was about 111,000 tons of sugar or 2/3 of domestic consumption. The production of molasses meets the country's requirements in alcohol.

In the foodstuffs industry 98.4% of establishments operated on a handicraft basis, while only 1.6% operated on an industrial scale.

This branch of industry represented 16.9% of total wages and salaries paid out in industry as a whole, and 17.7% of total industrial employment(1)

(d) The cement industry

Greek cement production in 1964 amounted to about 2,600 thousand tons, and it covers Greece's requirements for cement.

Note (1): In 1963 the number of persons employed in the foodstuffs industry was 76,443 persons.

Tourist Industry

Tourism

The history, topography and climate of Greece are conducive to tourism, and the devaluation of the drachma has lowered costs for foreign tourists.

Tourism constitutes one of the main sources of "invisible earnings" for the Greek economy.

Tourist earnings - about \$144 - per visitor - represented about 2% of the national income in 1966. Tourism now provides employment for some 50,000 persons, including 10,000 in hotels and catering.

The number of tourists in Greece increased from 541,470 in 1962 to 997,628 in 1966 or by 84%. Foreign currency earned from tourism increased from U.S. \$76 million in 1962 to U.S. \$143.5 million in 1966 or by 89%.

Greece has 2,165 hotel units (1966) with 85,323 beds. Despite intensive construction of new hotels, the available number of beds in hotels cannot keep pace with the demand.

In 1966, 966,896 foreigners visited Greece. The number of Canadians who visited Greece in 1966 was 15,646. Only Turkey, with 20 days of sojourn (1966) surpassed Canadians, who stayed in Greece for 15 days. Tourists from all other countries spent less time in Greece than did Camadians.

10. Electricity

Greece has considerable hydro-electric power potential and already about one-third of the country's supply of electricity is generated by hydro-electric stations.

Electric power production in Greece increased from 4,132 million kwh in 1965 to 5,600 million kwh in 1966. Available data indicate a further increase of 20% for the year 1967; it is estimated that it will exceed the 10 billion mark by 1970. The development of electrification in Greece has created favourable conditions for the industrialization of the countryside. The new management of the Public Power Corporation has a special program for electrification of Greece's rural areas. This program, includes for 1968, electrification of 1,200 villages.

11. Muclear Energy

The first atomic reactor in Greece is operating under the control of the "Demacritas" Nuclear Research Centre, for the production of isotopes and research.

12. Gross National Product

From 1954 to 1960, the G.N.P. increased at an average rate of 5.7% per year. Services represent a very large part of the net national product. about 40%. Trade amounted to 12%; Transport and Communications 8%, and housing nearly 7%.

Greek Gross National Income in 1966 was \$4,703 million at constant prices (1958) and \$5,823.3 million at current prices. The evaluation of the national income, at constant 1958 prices and in current prices, 1961-1966 in millions of dollars, was as follows:

	At Constant Prices	At Current Prices
1961 1962 1963 1964 1965	3,364.4 3,457.8 3,733.3 4,053.5 4,347.0 4,703.3	3,561.1 3,769.0 4,152.0 4,638.2 5,177.2 5,823.3

(Source; Economy of Greece, 1967)

The growth rate of G.N.P. in 1967 is only expected to be about 5% compared with the average of 8% expected in the Five-Year Plan, 1967-1972.

13. Foreign Trade

Greece trades with a large number of countries, mostly on the basis of multilateral or bilateral trade agreements. With a predominantly agricultural, shipping and trading economy, Greece has the strongest possible interest in open-door commercial policy, and the free flow of international trade.

The trend of foreign trade in the last decade has shown a radical change in geographical structure, which seems to have been one of the principal causes of the export difficulties.

Exports have not played a vital part in Greek economic development and export promotion is one of the basic problems of the Greek economy.

Without strong exports Greece could not maintain a strong domestic currency policy and develop economical and technological progress.

Agricultural products are the basic articles of export. Tobacco, cotton, citrus fruit, grapes, raisins, fresh fruits and vegetables account for a major part of exports. Basic export commodities also include unprocessed mineral ores, headed by bauxite. Manufactured goods, although increasing sharply from year to year comprise only a small part of Greek exports.

Exports to the convertible currency countries of the few agricultural products which make up the bulk of Greek exports (raisins, cotton, citrus fruit) was seriously hampered by keen competition from other countries or as in the case of tobacco, sales difficulties seem to be associated with special trading difficulties for this product, a restrictive attitude of certain buyers or by changes in the tastes of consumers.

The nature of Greek exports has tended to reassume its pre-war pattern.

Tobacco leaf represented before the war from 40% to 50% of total exports

by value, and this percentage has only recently been regained.

Exports of dried fruits, currants and sultanas, have fallen since the Second War. On the other hand, some new lines of export have emerged to partially replace these, notably fresh grapes, citrus fruits, cotton and textiles, chemicals and cement.

Three-quarters of Greek tobacco exports were absorbed before the war by the United States and Germany. Today exports to the United States have been replaced by a number of small but important customers.

In Greece there are no export restrictions except for a few commodities requiring a licence. In principle, no customs or other duties are levied on exports. In a number of cases, specified by ministerial decision, any import duties paid by manufacturers for raw material to be used in the production of export goods are refundable.

The reasons for the low level of Greek exports can be attributed to the composition of Greek exports where a small number of agricultural products composes the main bulk of exports.

By countries, first place in Greek exports is occupied by West Germany, with 19.8% of the total (1966). It is followed by the United States with 10.4% and the Soviet Union with 7%; Canada's share is only 0.4% of the total Greece exports.

Despite the fact that Greece is an agricultural country, it needs constantly to import foodstuffs, especially wheat and sugar. It also requires many kinds of manufactured goods, as well as fuels and raw materials, for its own manufacturing industries.

The demand for imported manufactured goods of all kinds will remain high as long as effective demand exceeds domestic production, which will be the case for many years to come. On the other hand, increased manufacturing activity will provide a continuing market for raw material and machinery.

Over 40% of Greek imports now come from the European Common Market and nearly 10% from the United States.

Mestern Germany has succeeded in regaining the most important role as a supplier. German iron and steel material, metal manufactures and chemicals are firmly established in the Greek market, and German consumer goods in great variety are prominent.

Imports from the United States of America are primarily surplus agricultural products, machinery and other metal manufactures, vehicles and chemicals.

The other main suppliers are Italy, especially in cotton and synthetic textiles and a variety of light manufactures and vehicles, and France with textiles, chemicals and machinery. Belgium has considerably increased her share of the market since the war, notably in chemicals, metal manufactures and textiles.

The rapid rise in imports is mainly attributable to larger purchases of consumer goods because Greeks have a penchant for imported goods.

In 1967 the growth rate of imports has slackened. This is partly due to import substitutions and partly to slight economic depression.

In 1962 Greece became associated with the European Common Market. According to the Treaty with E.E.C., the transitional period for the abolition of Customs Duties by Greece is in principle 12 years, but for a large number of industrial products, including nearly all those manufactured in Greece, it has been fixed at 22 years.

The slower rate of tariff elimination accorded to Greece is intended to enable the country to develop its industries without having to face crippling competition from the more highly developed countries of the E.E.C. during Greece's development stage.

To help Greece accelerate her development effort, the E.E.C. is granting economic aid for development and infrastructure projects. Greece's association will develop into full membership with E.E.C., after it has built up its economy to the point of being able to assume all the obligations deriving from the Rome Treaty.

The results of Greece's association with E.E.C. will depend on its ability to adapt the Greek economy to the level of member countries of E.E.C.

Greece's association with the E.E.C. has so far been a dissappointment for the Greeks. Greece's trade position with that group in the past three years has remained static, with imports accounting for 40% of her total, and exports for about 32%; EFTA supplies 20% of imports and takes about 12% of exports

The five-Year Plan, 1967-1972, envisages an average annual increase in imports of 9.7 per cent in comparison with 13.4% between 1960 and 1966.

The export growth rate from 1967 to 1972, is set at 10.8% as against 9.4% previously.

14. Canadian Exports to Greece

The Canadian Balance of trade with Greece has consistantly been in favour of Canada. But this imbalance is offset by invisible Greek earnings, such as earnings of Greek ships carrying Canadian cargoes, remittances from Greek immigrants working in Canada, and the expenditures of the growing number of Canadian tourists and business visitors to Greece.

Canadian major export items are aluminium, potoato seed, asbestos, sulphur, crude or refined, communication and related equipment, furs, wood pulp, newsprint paper, aluminium, truck and bus tires, and spark plugs and parts.

Imports from Greece consist mainly of agricultural products such as cheese, olives, grape wines, figs, olive oil, cotton yarn and magnesia.

Canadian imports, exports and balance of trade with Greece, 1958-1967, were as follows:

(\$ Canadian)

Year	Imports	Exports	Balance
1958	362,631	3,978,149	+3,615,518
1959	309,960	3,798,056	+3,488,096
1960	537,910	5,446,209	+5,008,299
1961	544,731	4,995,258	+4,450,527

Canada can participate in the expanding Greek market more so than she has done in the past. The Greek import possibilities include: industrial machinery and equipment; construction equipment; foodstuff industries equipment; textile machinery and equipment; diesel engines; sparkignition petrol engines; pasteurizing and filtering equipment; lifts, hoisting, excavating and crushing machinery: electric generators, electric motors, accumulators and batteries; rolling stock: passenger motor cars, lorries and vans; special agricultural machinery and equipment; air conditioning equipment; hand tools and accessories for machine tools: various types of pumps; asbestos and asbestos products; unwrought lead, zinc, and aluminium; aluminium sheets, plates and strips, synthetic rubber: sulphur; synthetic leather, transmission belts: paper pulp, waste paper, newsprint; fabric and yarns made of artifical and synthetic fibres; garment and clothing accessories; fishing nets; scientific and precision instruments; office equipment; appliances; various consumer goods.

Increasing prosperity of the Greek people will be reflected in a greater demand for consumer goods of all kinds, particularly consumer durable goods. The volume of investment going into the Greek economy, is providing real sales opportunities for our producers, especially for capital equipment.

Construction of electric power generating facilities, the expansion and improvement of the country's highway and railroad networks, telephone and telegraph systems, all can provide new opportunities for the sale of Canadian equipment and services. NATO projects in Greece, from time to time, offer opportunities for Canadian firms.

15. Balance of Trade

Greece suffers from a chronic trade deficit: this is its main economic problem. Exports and invisible earnings together, cover only about 65% of imports.

GREEK BALANCE OF TRADE

(Millions U.S. Dollars)

Year	Imports	Exports	Balance

Source: Bank of Greece, Monthly Statistical Bulletin, December 1967

16. Balance of Payments

The deficit on current transactions in Greece's Balance of Payments is steadily increasing. This largely caused by the increase of imports and the increasing trade deficit.

The deficit on current transactions increased from \$89.4 million in 1961 to \$264.1 million in 1966. This increase in the deficit was, however, offset for the most part by substantial increases in invisible earnings and emigrant remittances.

Greece's Balance of Fayments, 1961-1966, in million U.S. dollars.was as

The basic long-term aim in the balance of payment policy is the organic improvement of the balance of trade by the replacement of imports with domestic products and by the development of new export products.

17. Economic and Trade Policy

The success of the stabilization policy and the restoration of confidence in the drachma, has allowed the gradual relaxation of credit policy, the substantial increase in state-financed investment and liberalization of imports.

Greece virtually has complete freedom of imports. 90% of all commodities are imported freely and only the remaining 10%, which includes certain categories of machinery, (pumps, electric motors and diesel-engines) and farm products, requires import licences.

Greece has refrained from excessive protectionism in order to encourage local manufacturers to produce economically and to avoid major price increases.

For certain items, there are very low duties, or no duty at all. Duties are nonetheless relatively high on agricultural products and textiles.

A special tax may also be imposed, in addition to existing tariffs, in order to protect local industry.

The monopoly of foreign exchange is vested in the Bank of Greece. All foreign currency acquired by Greeks residing in Greece must be converted into drachmas, either at the Bank of Greece or through an authorized commercial bank. Foreign exchange transactions, in general, are subject to approval or authorization by the Foreign Exchange Control Authorities.

Free export of foreign exchange is permitted for rental payments on foreign machinery, royalties and fees, transfer abroad of salaries of foreign personnel, etc.

Greece is a member of GATT.

The Greek Planning and Economic Research Center submitted a new Five Year Economic Plan. Its aim is a growth rate in G.N.P. of between 7.5% and 8.5% annually during the next five years and it hopes to increase average annual per capita incomes from \$750 to over \$1,000 at current prices, over the same period.

17a. Investment

Greece has introduced a number of tax concessions and other similar measures with the purpose of attracting foreign capital.

Foreign investment in Greece, by selected countries and economic branches, is participating as follows:

Austria in magnesite mine exploitation;

Italy in power transmission cables factory, rubber tires and tubes factory;

U.S.A. exploitation of airlines, shipbuilding, chemical industry, cement factories, asbestos mines, motorcar, rubber tires and tubes;

Switzerland . . . in polystyrene factory, bauxite and tourist industry;

Canada in manufacturing of pulp, writing paper and newsprint, copper;

France in fertilizers and mining;

West Germany . . . chemical products and fertilizers, mining;

The Netherlands . . radio and T.V. manufacturing, and chemicals;

Israel manufacture of prefabricated components for housing.

Greece is fully aware of the role which foreign capital and know-how could play in the development of Greece and it is making special efforts to attract foreign investors. Foreign investment has been vital to Greece ever since the nation began its struggle for economic development, 15 years ago.

The development of gross investment of fixed capital (excluding ships), in Greece, 1963-1966, in millions of U.S. dollars, was as follows:

		1963	1964	1965	1966
1.	Agriculture	128.2	144.3	157.9	
2.	Mines - Quarries	11.2	12.0	16.4	
3.	Manufacture	111.5	142.5	188.9	
4.	Energy - Irrigation - Drainage	61.2	93.8	118.0	
5.	Transportation - Communications	163.4	211.4	230.1	
6.	Housing	300.7	375.4	435.3	
7.	Public Administration	8.5	7.5	6.2	
8.	Other Activities	131.8	155.8	158.8	
	TOTAL-	916.7	1,142.8	1,311.5	1,528.3

Source: Economy of Greece, 1967.

The government is actively soliciting productive foreign investment.

By a happy circumstance, Greece is exempt from the United States direct investments restrictions in 1968. Thus Greece will be able to receive new net U.S. investments up to 110% of the 1965-1966 average.

Recently, Greece signed a contract with Litton-Benelux for the economic development of Crete and Peloponnessus. Under the terms of the contract, Litton has assumed an obligation to invest \$840 million in Greece within 12 years.

18. Conclusions

Two important developments have outlined the future course of the Greek economy. The first was the association with the powerful, dynamic economic group of the E.E.C. and the second was the establishment of the Five Year Plan. Both will lead to industrialization of the country. The advantages of the industrialization of Greece are clear; it allows rapid progress in G.N.P., leads to the creation of prosperous, rapidly growing development areas and extends the range of products available for export.

Greece's agreement with the E.E.C. means to the Canadian businessmen an increasing trade potential because it represents an open door to a market of 185 million people. The gradual unifying of the Greek and E.E.C. markets will give stimulus to Greek economic growth, and this should help to counter-balance tariff disadvantages, such as Canada is experiencing, as Greece's duty rates for imports from the E.E.C. are progressively lowered.

The industrialization depends, in particular, on a very large increase in imports of capital equipment.

The share of imported capital investment accounts for more than 37% of the total capital invested in Greek private industry. This percentage does not include capital funds imported from abroad for Aluminium - Hellas, Esso Pappas, and the fertilizer plants of the National Bank and Commercial Bank of Greece.

The Greeks are trying hard to increase their productive capacity and national income, because this is the only way to raise their standard of living to the levels of more advanced countries. The per capita income in Greece has risen from U.S. \$100 in 1946 to U.S. \$567 in 1966.

The rise in the standard of living has been characterized by the growing proportion of consumption expenditure, represented by payments for housing and miscellaneous services, and by purchases of nonedible products.

Despite all efforts to industrialize Greece, domestic industry is not yet able to meet the continuously rising demand from domestic consumers.

Greece is spending about 20% of its national income on imports.

The economic development potential in Greece is large, but in many respects it has remained unexploited.

APPENDIX F

CURRENCY

The national currency is the Drachma, sub-divided into 100 leptas.

There are coins: 5, 10, 20 and 50 leptas and for 1, 2, 5, 10, 20 and 30 Drachma.

Bank notes are in circulation in denominations of Drachma 50, 100, 500 and 1,000.

The international parity of the Drachma is:

1 U.S. \$ = Drs. 30

1 Can. \$ = Drs. 27.86
